

University Specialist in Surgery and Regeneration in Oral Implantology

The general objective of this postgraduate university training program is to train postgraduate students (stomatologists or dental graduates), with a solid and broad theoretical background, as well as adequate clinical experience where they will safely apply the knowledge gained in program development.

This course has a clinical and investigative function in which the student has to prepare and develop, and then present, a final paper before a commission. Students will be able to critically analyze the published and selected scientific works and the techniques that will be used, they will learn and develop a technique with the aim of guaranteeing the patient functional health and adequate aesthetics in relation to each thematic unit and acquire knowledge profits based on evidence and with subsequent practical application.

Headquarters:

Vlorë

Modality:

Presential

Certification / ECTS:

35

Professorato:

Dr. Pietro Rutigliani

Dr. Juan Alberto Fernández

Dr. Ennio Calabria

Dr. José María Aguado Gil

Dr. Vicente Gimeno

Dr. Giovanni Falisi

Planning

During this postgraduate course, a continuous evaluation will be carried out with individual theoretical and practical exercises in order to pass the final exam. In order to be assessed, the student must attend 80% of both theoretical and practical lessons.

Module I: Basic Sciences in Implantology - 3 ECTS

Module II: Basic Sciences in Implantology - 3 ECTS

Module III: Periodontology - 3 ECTS

Module IV: Prosthetics on implants - 3 ECTS

Module V: Sinus lift - 3 ECTS

Module VI: Bone regeneration - 3 ECTS

Module VII: Crest Expansion - 3 ECTS

Module VIII: Short implants - 3 ECTS

Module IX: Guided bone regeneration of tissues in large atrophies - 4 ECTS

Module X y XI: Clinical practice on patients - 7 ECTS
